高压继电器状态确认

DOC
Text

Unit detailed design

This subsystem calculates the actual status of Hv relay, for example closed, open, stuck, based on the actual status of Hv battery, the main positive relay, the main negative relay, and the precharge relay.

充电连接温度故障

DOC
Text

Unit detailed design

This subsystem calculates AC Charger over temperature flag based on L1 temperature and N temperature, also calculates DC Charger over temperature flag based on charger temperature.

This subsystem calculates the allowed flag of park charge or discharge based on drive gear P or EPB actual applied status.

DC充电上高压

DOC

Text

Unit detailed design

This subsystem calculates DC charge enable flag and DC charge wake up vehicle high voltage power up flag.

This subsystem calculates Tbox remote wake up vehicle high voltage power up flag.

高压上电请求

DOC
Text

Unit detailed design

This subsystem calculates high voltage start up request flag, based on AC charge, DC charge, Key on, remote power up.

Documentation
